

NYU Grossman School of Medicine Institute for Innovations in Medical Education Guidelines for the Educational use of Generative Artificial Intelligence Tools

Last revised 8/13/24

These guidelines are designed to encourage safe use of AI tools by NYU Grossman School of Medicine medical students, residents, and fellows. These guidelines complement the relevant official policies for [medical students](#) and [residents](#). If you have any questions or comments on these guidelines, please contact [Dr. Marc Triola](#).

Generative artificial intelligence applications can create convincingly authentic images, videos and text on demand. Many products are available from Open AI (ChatGPT), Google (Gemini), Anthropic (Claude), Microsoft (Copilot), and others.

Guidelines on using Generative AI for your education:

- Unless explicitly instructed otherwise, AI tools should not be used on exams, quizzes, or other assessments. Treat using AI like collaborating with a classmate.
- AI tools can be used in other coursework under two circumstances: the instructor approves, and the use does not violate NYU Grossman School of Medicine's Honor code. If you do use AI in coursework, cite the specific tool used and ideally include the prompt.
- Individual course directors are free to set their own policies regulating the use of generative AI tools in their courses/modules. Faculty should set such policies in their course syllabi.
- Never put personal or confidential information in a public AI tool. Sensitive information includes protected health information (PHI) of your patients, research data, course materials, lecture slides, assessment questions, intellectual property of NYU (or your own), or other information you don't want others to see such as manuscripts, grants, essays, etc. Be mindful that tools like Word/PowerPoint/Outlook, Google Docs, and grammar/spellcheckers (e.g., Grammarly) now have integrated AI. When you use the AI features of those tools, you are using public AI.
- Lectures and lecture materials are the intellectual property of the faculty and NYU Grossman School of Medicine. You should not permit any AI application other than those provided by MCIT to record, or upload to non-MCIT AI, recordings or lecture materials from lectures, labs, seminars, or other non-public NYU Grossman School of Medicine educational activities.
- If you want to use AI with personal or confidential information, use the HIPAA compliant ChatGPT provided by MCIT: <https://nyugpt.nyumc.org>.
- Some commercial content providers do not permit the use of any AI (public or private) with their material. This includes medical journals, textbooks, licensed material such as UpToDate, Amboss, and others.
- You are accountable for the accuracy of any AI-generated information. AI makes mistakes and can include fabricated information. Always double check AI output.
- You should not use any generative AI application in connection with or to generate your clinical documentation, such as patient notes included in the medical record.

Examples of when you can use public or private Generative AI tools

Example Use of AI	Public Tools (e.g. ChatGPT, Claude, Gemini)	Private ChatGPT from NYU Langone MCIT
Create a virtual OSCE using NYU Grossman School of Medicine's OSCE cases as an example.	✗	✓
Generate Anki flashcards for USMLE Step 1	✓	✓
Summarize your personal lecture notes	✓	✓
Summarize lecture slides authored by an NYU Faculty member	✗	✓
Generate a differential diagnosis on a real patient case	✗	✓
Analyze the responses of research study participants to find common themes	✗	✓
Generate an image for a presentation	✓	-
Generate a conference abstract	✓	✓
Generate MCQs and Flash cards from only the AI	✓	✓
Generate MCQs and Flash cards using NYU Grossman course materials	✗	✓
Generate virtual patient cases / clinical vignettes	✓	✓
Work on an NYU Grossman PBL or CPC case	✗	✓
Write a patient note to paste into Epic	✗	✗
Summarize an open-access article abstract from PubMed Central	✓	✓
Summarize or edit content from a commercially licensed information resource (e.g. UpToDate, Amboss, journal literature, textbooks)	✗	✗
