

Policy for the Use of Generative Artificial Intelligence (GenAI) in Educational Environments

Summary of Purpose

This new policy outlines the guidelines for the responsible, ethical, and privacy-conscious use of generative artificial intelligence (GenAI) in medical and health sciences educational environments, for both teaching and learning. The purposes of this new policy are 1) to support the development of course materials, including learning objectives, 2) to maintain academic integrity with assignments and assessments, and 3) to respect privacy and confidentiality.

Scope and Applicability

This policy applies to all Geisel students and instructors¹, across medical and health sciences degree programs, who use generative AI technologies in their educational activities. These activities include but are not limited to the development, delivery, and completion of coursework and clinical training.

Geisel students and instructors are responsible for critically assessing the accuracy, authenticity, and quality of their materials and assignments and for understanding the limitations of AI tools which could potentially provide misinformation, inaccuracies, or fabrications.

Definitions

Generative AI (GenAI): A subset of AI technologies that can create new content, such as text, images, audio, or data, based on patterns learned from existing information. This includes tools such as language models and image generators that can assist with learning and teaching. Specific examples include - but are not limited to - OpenAI, ChatGPT, chatbots, or any other Large Language Model or Generative Pre-Trained Transformer.

¹ In this policy, the term “instructors” refers to all faculty and/or non-faculty educators who are engaged in teaching activities with Geisel students.

Policy Statement

Generative AI technologies, such as language models and image generation tools, have the potential to enhance teaching and learning across Geisel's medical and health sciences educational environments and programs. The objectives of this new policy are to:

- Promote the responsible and ethical use of generative AI in educational activities.
- Ensure that generative AI tools are used to enhance learning and not to replace critical thinking and clinical judgment.
- Maintain academic integrity and prevent misuse of generative AI technologies.
- Protect the intellectual property (IP) of all instructors.
- Safeguard the privacy of individuals and the confidentiality of personal, educational, and institutional data that may be accessed or processed by generative AI tools.

Procedure/Guidelines for Use

Educational Enhancement, Curricular Development

- Generative AI tools may be used by instructors to assist in the creation of educational content, to develop supplemental educational materials, and to provide personalized learning experiences.
- Instructors are encouraged to take advantage of guidance, support, and training on the ethical use of generative AI in medical and health sciences education.
- Instructors are encouraged to integrate generative AI tools into their delivery of the curriculum in a way that encourages critical thinking and enhances learning outcomes, *to support but not replace* critical thinking and clinical judgement.

Academic Integrity

- Instructors are expected to educate students on the ethical use of generative AI and the importance of maintaining academic integrity.
- Unless explicitly stated by the instructor, students are not permitted to utilize generative AI for the completion of graded/assessed coursework, in the classroom or clinical settings.
- If/when the use of generative AI is permitted by the instructor, students must disclose and appropriately cite the use of generative AI tools in all of their academic work. Specifically:
 - Students should be aware that courses differ in expectations regarding the use of AI.
 - If/when allowed by the instructor, students must disclose their use of AI as directed in a course syllabus or assignment instructions.
 - Just as they would when citing or referencing any other source, students may not use entire sentences or paragraphs suggested by an AI app without providing quotation marks and a citation.
 - Citation format: OpenAI, ChatGPT. Response to prompt: "Explain what is meant by the term 'Triple Bottom Line'" (February 15, 2023, <https://chat.openai.com/>).
 - The use of generative AI to draft or complete assignments, exams, or other assessments without proper attribution is considered misrepresentation of scholarly

work, plagiarism, academic misconduct, and a violation of Geisel's Student Honor Code.

Privacy and Confidentiality

- GenAI-generated data must be managed with the same responsibility, security, and integrity as any other education, research, and patient data.
- Unless explicitly allowed by the instructor, uploading Geisel course materials to local or cloud-based generative AI systems such as ChatGPT by medical students and health sciences students is forbidden.
- Generative AI tools must be used in compliance with privacy laws and regulations (HIPPA and FERPA), including the protection of intellectual property (IP).
- Users must ensure that any data input into generative AI tools is de-identified and does not contain sensitive or confidential information pertaining to patients, students or any member of the Geisel community.

Monitoring and Compliance

- Geisel has standing curriculum and academic progress committees that will monitor the use of generative AI and ensure compliance with this policy.
- Violations of this policy will be addressed through the school's existing academic misconduct procedures.

Review and Updates

- This policy will be reviewed at least annually and updated as necessary to reflect rapid advancements in generative AI technologies, as well as any changes in legal and ethical standards.
- This policy is considered in the context of a portfolio of relevant policies across the Dartmouth community, including but not limited to Dartmouth College, and aligns with other institutional policies referencing the use of generative AI.

Accreditation Standards 2025

For the MD program, Liaison Committee for Medical Education (LCME): No standards specific to generative AI. Relevant related standards include:

Element 7.4, Critical Judgment/Problem-Solving Skills, states the following:

“The faculty of a medical school ensure that the medical curriculum incorporates the fundamental principles of medicine, provides opportunities for medical students to acquire skills of critical judgment based on evidence and experience, and develops medical students' ability to use those principles and skills effectively in solving problems of health and disease.”

Element 7.7, Medical Ethics, states the following:

“The faculty of a medical school ensure that the medical curriculum includes instruction for medical students in medical ethics and human values both prior to and during their participation

in patient care activities and require medical students to behave ethically in caring for patients and in relating to patients' families and others involved in patient care.”

Loosely interpreted, these LCME standards can be applied to a policy referencing the responsible and ethical use of generative AI in teaching, learning, and assessment of knowledge and skills.

For the health sciences programs, Council on Education for Public Health (CEPH): No standards specific to generative AI.

History

Date	History
4/23/25-6/15/25	Policy drafted; input solicited from Geisel deans, faculty, and staff
6/18/25	Policy reviewed by the MD Program's Medical Education Cmte (MEC)
6/19/25	Policy presented to the Dean's Academic Board (DAB)
8/7/25	Policy presented to Geisel's Faculty Council

Background

GPT 4.1 mini 2025-04-14. Response to prompt: "create a medical school policy on the use of generative artificial intelligence in the educational environment" (first draft generated April 23, 2025, <https://chat.dartmouth.edu/>)

This Geisel AI Policy follows the guiding principles set forth by the *Principles for the Responsible Use of Artificial Intelligence in and for Medical Education* (<https://www.aamc.org/about-us/mission-areas/medical-education/principles-ai-use>) dated January 3, 2025:

1. [Maintain Human-Centered Focus](#)
2. [Ensure Ethical and Transparent Use](#)
3. [Provide Equal Access to AI](#)
4. [Foster Education, Training, and Continuing Professional Development](#)
5. [Develop Curricula Through Interdisciplinary Collaboration](#)
6. [Protect Data Privacy](#)
7. [Monitor and Evaluate](#)
